

Content-Type Styling Run

2026-09-27 · branch `content-type-styling-plan` (main merged at 5f64202) · plan: `plans/content-type-styling.md` · **nothing committed, nothing pushed** (theme + submodule changes are in the working tree; the `lp.content` prerequisite is PR #71)

This run (1) fixed **GitHub issue #70 — uneven grid layout** at the root and rewrote `grid_layout` as a true CSS grid; (2) ran the first style transfer on the folder displays that became reachable this week — `folder_summary_view` (+ `_alpha`), `folder_full_view`, `tabular_view` — and re-verified `contents_full`, `chronological` and `alphabetical` at their **plain folder URLs**, which now render the assigned layout; (3) recorded the decision on `album_view`; (4) wrote the `SAMPLE/css-notes` reference for each new layout and updated the plan's prerequisite status and listing checklist.

1. Prerequisite change since the last run — folders now carry their layout

Step	Result
Fresh full import (2026-09-17/18) + <code>enable_subsites</code>	9514 items, 14 child sites themed. Backup <code>plone-data-post-import-subsites-themed-20260918.tgz</code> in the Google Drive transfer folder.
main merged 2026-09-27	Brought David's <code>folder_summary_view.pt</code> rewrite (KSS reference gone → 200), new <code>folder_full_view.pt</code> , alias scripts for <code>atct_album_view</code> / <code>folder_tabular_view</code> , and the README add-on/subsite steps.
<code>assign_folder_views.sh</code> x3 (backend stopped each time)	Run 1 (main as-is): 0 assigned / 1203 unavailable — every folder reports only the five stock displays. Run 2 (+ Folder FTI <code>view_methods</code>): 448 assigned, 751 unavailable — only the <code>@@contents_full</code> browser view validated. Run 3 (+ <code>setCurrentSkin</code> in the script): 1190 of 1203 assigned ; 13 left are per-site <code>*_home</code> / <code>*_section</code> one-offs. 359 default pages. 120-folder random sweep: all HTTP 200.
PR #71 <code>fix/folder-view-methods</code> (<code>lp.content</code> only)	<code>types/Folder.xml</code> (+ <code>types.xml</code> entry — the typeinfo importer silently ignores unlisted types), profile 1001→1002 + upgrade step, <code>upgrades</code> package wired into ZCML, <code>LAYOUT_MAP</code> for the stock aliases, skin setup in the importer. Applied to the local DB; awaiting review.

Consequence for this plan: the "direct URL" caveat is gone. Every sampled page below was captured at its plain URL; body classes are unchanged, so all earlier Layer 1 work applies as-is.

2. Issue #70 — "Uneven grid layout display" (fixed)

Reproduced on `wildland-fire /image-gallery` (20 Image tiles) at 1660: rows of **5, 4, 8 and 3** tiles with widths from 97px to 402px, tiles overflowing the row. Measured tile computed style: `flex: 1 1 0%`.

Root cause. Enumerating every loaded rule that touches `.tileItem` on the page showed `.grid_layout .tileItem { flex: 1 }` coming from the **wildland-fire theme bundle** — copied verbatim from the live wildland-fire theme CSS into `wildland-fire/scss/_custom.scss` (se-firemap has the identical block). `flex: 1` means flex-basis 0 + grow, which overrides the Layer 1 `width: calc((90% - 50px)/3 - 1px)`; each row then packs as many tiles as their min-content widths allow (flex items default to `min-width: auto`) and stretches them. The other 13 themes only held at 3-up because nothing there set `flex`.

Fix (Layer 1, `_shared/scss/content-types/_listings.scss`). `.grid_layout` is now `display: grid; grid-template-columns: repeat(3, minmax(0, 1fr)); gap: 30px; align-items: start; tiles get width: auto; min-width: 0; margin: 0`. `flex` has no effect on grid items, so the theme overrides became inert and were reduced to their background colour; their live 1130px single-column breakpoint was re-expressed as a grid rule. Breakpoints: 3 → 2 columns ≤ 991px → 1 column ≤ 768px (live: 3 → 1 at 768). `minmax(0, 1fr)` + `overflow-wrap: anywhere` on headlines keep long URLs/titles from widening a column. Card chrome (1px #ededed, hover shadow, 220px cover band, 1.4rem headline, read-more pill) is unchanged.

Verified. `image-gallery: grid-template-columns` computes 412px 412px 412px, 7 rows, every tile at x 0/442/884. `grasslands /training` (portlet column): 3-up at 1660, one column at 390. The three-tile rows in the wildland-fire live capture are reproduced exactly.

BEFORE (local 1660) — 5 tiles in the first row;
the wildland-fire theme scrolls inside its wrapper
so the capture stops at the viewport

AFTER (local 1660) — 3 equal columns

LIVE (dev 1440)

grasslands /training AFTER (1660, beside the nav portlet)

support landscape-level conservation. Through these trainings, practitioners and landowners can learn about decision-support tools, science-led conservation techniques, research applications in the field, and ways to improve landscapes in partnership with other stakeholders.

3. Style transfer — folder_summary_view (+ folder_summary_alpha)

620 + 25 folders on 12 sub-sites — the most common custom listing. Live rules (site-wide `ploneCustom.css` + Plone 4 `base.css`, computed on bobscapes at 1440): tile separator `1px #dedede` with 20px top margin/padding; thumbnail frame floated left, `1px #ccc` border, 4px padding, 19.2/12.8px margins, image forced to **100px** wide; headline 1.5em (19.2px) brand colour, no underline; byline 85% #666; body 16px #444; "READ MORE..." pill 12px/600/#1f5c90 uppercase on white (hover #f38b1a). `≤768px`: headline clears the float at 1.3em. All shipped under `body.template-folder_summary_view`; the summary view joined the grouped selector that shares the headline-link / byline / pill rules with `grid_layout` and `contents_full`.

Template divergences flagged to `lp.content` (not CSS):

1. **No thumbnails.** `folder_summary_view.pt` renders `.tileImage` only when `obj/eq_explicit/image_thumb` (or `image_x_thumb`) exists — Archetypes scale accessors `Dexterity` objects never have, so 0 of 12 Image children show a thumb. Fix: `obj/@images/image/thumb`. The frame CSS is in place and verified against live values.
2. **Title and description printed twice** — the template emits its own `h1.documentFirstHeading` / `p.documentDescription` on top of main_template's. Hidden by an interim, commented rule; drop it when the template is fixed.
3. Tile order differs from live (folder positions not preserved by the import — known import gap).

bobscapes /bobscapes-images-1 BEFORE
(local 1660)

AFTER (local 1660) — separators, headline,
pill; thumbs need the template fix

bobscapes AFTER (390)

LIVE (390)

4. Style transfer — folder_full_view

56 folders (lp-parent 31). Local renders each child through Barceloneta's `@@full_view_item` (Plone 6 stock markup: `h1`, `#section-byline`, `p.lead`, the child's own view), not live's `.item > h2.headline` block, so Layer 1 tunes the stock markup to live's rhythm: entry separators, 1.6rem headline without underline, 85% grey byline, body-size description, and the File block left-aligned with an **orange uppercase DOWNLOAD** button (live `.download-btn-orange`). Flagged: one `h1` per child (live uses `h2`) and the description printed twice for Files (live does the same).

AFTER (local 1660)

LIVE (dev 1440)

5. tabular_view, album_view, and re-verification of contents_full / chronological / alphabetical

tabular_view (folder_tabular_view alias, 4 folders): Plone 4 `table.listing` chrome applied over Bootstrap's `.table-striped` — `#ddd` header band with `#666` labels, `#eee` odd rows, `#ddd` vertical rules, 95% text, no link underline. No public live folder has rows, so parity is rule-level. **album_view** (atct_album_view + galleryview, 10 folders): live was a collective.plonetruegallery slideshow / Plone 4 polaroid album — not reproducible in CSS; the Barceloneta card grid is the stand-in and needs a gallery add-on decision. No rules shipped.

Regression / re-verification at plain URLs: contents_full (se-firemap academic publications) still flex rows, 20px gap, `#dedede` separator, 230px se-firemap thumb frame, pill colour — unchanged. chronological (TWRA workshop) and alphabetical (WLFW climate-adaptation docs) render the stock Barceloneta listing markup as before; no rules needed.

[illegible]

6. Errors / decisions surfaced (need lp.content or config decisions)

1. `folder_summary_view.pt`: thumbnails never render on Plone 6 (`image_thumb` / `imagex_thumb` accessors) — visible on every one of the 645 folders.
2. `folder_summary_view.pt`: duplicate `h1` + description (interim CSS hide in place).
3. `folder_full_view` via `full_view_item`: an `h1` per child; description twice for Files.
4. `folder_contents_alpha` alias resolves to the folder-contents *management* screen — mapped to `alphabetical` in PR #71; confirm that is intended.
5. `album_view` / galleryview: pick a gallery add-on or accept the card grid (10 folders).
6. 13 layouts still unassigned: `wlfw_home` `bobscapes_home` `fire_home` `equity_home` `online_learning_en` `product_section` `project_section` `research_section` `resources_section` `staff_directory` `folder_leadimage_view` — site-home/section templates, own decision.
7. Import gaps unchanged: 24 folders missing, 272 default-page children missing, folder item order not preserved.
8. Theme hygiene: the per-theme `_custom.scss` files still carry copied live tile rules (`.tileItem{clear:both}` , `.tileHeadline{font-size:1.5em}` , grid backgrounds). They are harmless now but duplicate Layer 1; a later cleanup pass should lift or delete them.

7. Files changed (all uncommitted)

Path	Change
<code>themes/_shared/scss/content-types/_listings.scss</code>	<code>grid_layout</code> rewritten as CSS grid (issue #70); new <code>folder_summary_view</code> , <code>folder_full_view</code> , <code>tabular_view</code> blocks; summary view added to the shared tile selector
<code>themes/wildland-fire/scss/_custom.scss</code> , <code>themes/se-firemap/scss/_custom.scss</code>	<code>.grid_layout .tileItem { flex: 1 }</code> removed (background kept); 1130px breakpoint re-expressed for grid
<code>themes/*/styles/theme.css</code> , <code>theme.min.css</code> , <code>.map</code> (15 themes)	recompiled by the watcher; every selector confirmed in all 15 minified builds
submodule <code>captured-themes/_listings/</code>	<code>grid_layout/css-notes.md</code> (#70 section); new <code>folder_summary_view/</code> , <code>folder_full_view/</code> , <code>tabular_view/</code> , <code>album_view/</code> with <code>SAMPLE.md</code> , <code>css-notes.md</code> and live screenshots
submodule <code>plans/content-type-styling.md</code>	2026-09-27 prerequisite update; listing checklist rows for <code>grid_layout</code> , <code>folder_summary_view</code> , <code>folder_full_view</code> , <code>tabular_view</code> , <code>album_view</code>
submodule <code>plans/content-type-styling-run-2026-09-27.pdf</code>	this report
<code>src/lp.content/...</code> (6 files)	identical to PR #71 — leave uncommitted here; they will arrive via the PR
